AMENDMENTS

Claims:

Please amend the claims as indicated hereafter.

 \wp'

- 1. (Currently Amended) A wafer-level compressive-flow underfilling (WLCFU) process comprising the steps of:
- anount sufficient to ensure that the thickness of the solidified WLCFU layer is less than the height of the wafer bumps;
 - b. solidifying the WLCFU material;
 - e. separating the WLCFU material coated wafer into individual chips;
 - d. covering the top of the bumps with a tacky film;
- e. mounting the WLCFU material and tacky film coated individual chips to substrates; and
- f. reflowing the solder bumps and curing the WLCFU material and tacky film simultaneously.
- 2. (Original) The wafer-level compressive-flow underfilling (WLCFU) process of Claim 1, wherein said WLCFU material is a solvent-containing WLCFU material and said solidifying step includes the step of solidifying said WLCFU material by solvent removal.
- 3. (Original) The wafer-level compressive-flow underfilling (WLCFU) process of Claim 1, wherein said WLCFU material is a solvent-free fluxing WLCFU material and said WLCFU solidifying step includes the step of solidifying said WLCFU material by cooling.
- 4. (Original) The wafer-level compressive-flow underfilling (WLCFU) process of Claim 1, further comprising a post-curing step.

2

- 5. (Currently Amended) The wafer-level compressive-flow underfilling (WLCFU) process of Claim 1, wherein said WLCFU material comprises:
 - a. an epoxy resin;
 - b. an organic curing hardener;
 - c. a latent curing catalyst;
 - d. a fluxing agent; and
 - e. a silica filler.
- 6. (Original) The wafer-level compressive-flow underfilling (WLCFU) process of Claim 5, wherein said epoxy resin is selected from the group consisting of: a cycloaliphatic epoxy resin, a bisphenol A epoxy resin, a bisphenol F epoxy resin, an epoxy novolac resin, a biphenyl epoxy resin, a naphthalene epoxy resin, a dicyclopentadiene-phenol epoxy resin, a reactive epoxy diluent, and any mixture thereof.
- 7. (Original) The wafer-level compressive-flow underfilling (WLCFU) process of Claim 5, wherein said organic curing hardener is selected from the group consisting of: a phenolic resins, an aromatic amine, a carboxylic acid anhydride, an imidazole, and an imidazole derivative.

23

- 8. (Currently Amended) The wafer-level compressive-flow underfilling (WLCFU) process of Claim 5, wherein said curing catalyst is selected from the group consisting of: a tertiary amine, a tertiary phosphine, an imidazole, an imidazole derivative, an imidazolium salt, a metal chelate, an onium salts salt, a quaternary phosphonium compound, 1,8-diazacyclo[5.4.0]undex-7-ene, and any mixture thereof.
- 9. (Original) The wafer-level compressive-flow underfilling (WLCFU) process of Claim 5, wherein said fluxing agent comprises a compound containing a hydroxyl (-OH) group.

10. (Original) The wafer-level compressive-flow underfilling (WLCFU) process of Claim 5, wherein said fluxing agent comprises a compound containing a carboxylic (-COOH) group.

24

- 11. (Currently Amended) The wafer-level compressive-flow underfilling (WLCFU) process of Claim 5, wherein said silica filler is selected from the group consisting of: a spherical fused silica filler, a silicon nitride filler, a silver flake filler, and a gold flake filler with diameters ranging from 0.1µm to 50µm.
- 12. (Original) The wafer-level compressive-flow underfilling (WLCFU) process of Claim 5, wherein said WLCFU material further comprises a solvent.
- 13. (Original) The wafer-level compressive-flow underfilling (WLCFU) process of Claim 12, wherein said solvent is an organic chemical having a boiling point between 25°C to 200°C which does not react with any other components in the WLCFU composition/formulation.
- 14. (Original) The wafer-level compressive-flow underfilling (WLCFU) process of Claim 12, wherein said solvent is 4-methyl-2-pentanone.
- 15. (Original) The wafer-level compressive-flow underfilling (WLCFU) process of Claim 5, wherein said WLCFU material further comprises an adhesion promoter.
- 16. (Original) The wafer-level compressive-flow underfilling (WLCFU) process of Claim 15, wherein said adhesion promoter is selected from the group consisting of: a silane coupling agent, a titanate, and a zirconate.
- 17. (Original) The wafer-level compressive-flow underfilling (WLCFU) process of Claim 5, wherein said WLCFU material further comprises a surfactant.

- 18. (Original) The wafer-level compressive-flow underfilling (WLCFU) process of Claim 17, wherein said surfactant is a non-ionic surfactant.
- 19. (Original) The wafer-level compressive-flow underfilling (WLCFU) process of Claim 1, wherein said tacky film comprises:
 - a. an epoxy resin;
 - b. an organic curing hardener;
 - c. a latent curing catalyst; and
 - d. a fluxing agent.
- 20. (Original) The wafer-level compressive-flow underfilling (WLCFU) process of Claim 19, wherein said tacky film is selected from the group consisting of: a cycloaliphatic epoxy resin, a bisphenol A epoxy resin, a bisphenol F epoxy resin, an epoxy novolac resin, a biphenyl epoxy resin, a naphthalene epoxy resin, a dicyclopentadiene-phenol epoxy resin, a reactive epoxy diluent, and any mixture thereof.
- 21. (Original) The wafer-level compressive-flow underfilling (WLCFU) process of Claim 19, wherein said organic curing hardener is selected from the group consisting of a phenolic resin, an aromatic amine, a carboxylic acid anhydride, an imidazole, and an imidazole derivative.
- 22. (Original) The wafer-level compressive-flow underfilling (WLCFU) process of Claim 19, wherein said latent curing catalyst is selected from the group consisting of: a tertiary amine, a tertiary phosphine, an imidazole, an imidazole derivative, an imidazolium salt, a metal chelate, an onium salts, a quaternary phosphonium compounds, 1,8-diazacyclo[5.4.0]undex-7-ene, and any mixture thereof.
- 23. (Original) The wafer-level compressive-flow underfilling (WLCFU) process of Claim 19, wherein said fluxing agent comprises a compound containing a hydroxyl (-OH) group.

24. (Original) The wafer-level compressive-flow underfilling (WLCFU) process of Claim 19, wherein said fluxing agent comprises a compound containing a carboxylic (-COOH) group.

a5

- 25. (Currently Amended) The wafer-level compressive-flow underfilling (WLCFU) process of Claim 19, wherein said tack tacky film further comprises and an adhesion promoter.
- 26. (Original) The wafer-level compressive-flow underfilling (WLCFU) process of Claim 25, wherein said adhesion promoter is selected from the group consisting of: a silane coupling agent, a titanates, and a zirconate.
- 27. (Original) The wafer-level compressive-flow underfilling (WLCFU) process of Claim 19, wherein said tacky film further comprises a surfactant.
- 28. (Original) The wafer-level compressive-flow underfilling (WLCFU) process of Claim 27, wherein said surfactant is a non-ionic surfactant.

29. - 53. (Withdrawn)

In the Abstract:

Please replace the pending abstract with the newly-submitted abstract attached herewith on a separate sheet.
